

## Rural Roads Initiative Survey

The simple survey is for municipalities in Warren County, and the surrounding areas, to submit road and bridge infrastructure projects into the Rural Roads Initiative (RRI) grant project. The project (RRI) is a multi-municipality, multi-county effort (being led by Warren County) to build a regional grant application for Northwest Pennsylvania that would pool projects and draw down federal funding to help provide infrastructure repairs and upgrades in rural communities.

Our grant application will try and tap into several programs but one of our main focuses is the [Rural Surface Transportation Grant](#) program. This survey is not a grant application itself, but to simply identify potential projects to be included in the grant application, which will be managed by Warren County and take place in 2023.

Below are the parameters for applying to be included in the project scope:

- Municipalities should identify 1-3 projects to be included. One survey per project, with the understanding that each municipality will probably have a maximum of one project to be selected for inclusion in the grant application.
- Preliminary engineering is not required for application, but if you have some engineering for your project, please include it in your application email. All materials must be scanned and in PDF format.
- Please keep your descriptions as simple as possible. This form is simply for the planning team to identify potential projects. The details of the projects will be defined later in this process.

The county will collect data through the remainder of September 2022 and will begin selecting projects at the beginning of October. There is no specific deadline for application; however, municipalities are encouraged to submit their surveys as soon as possible in 2022.
